

Banana Teardown

Written By: Sterling Hirsh

INTRODUCTION

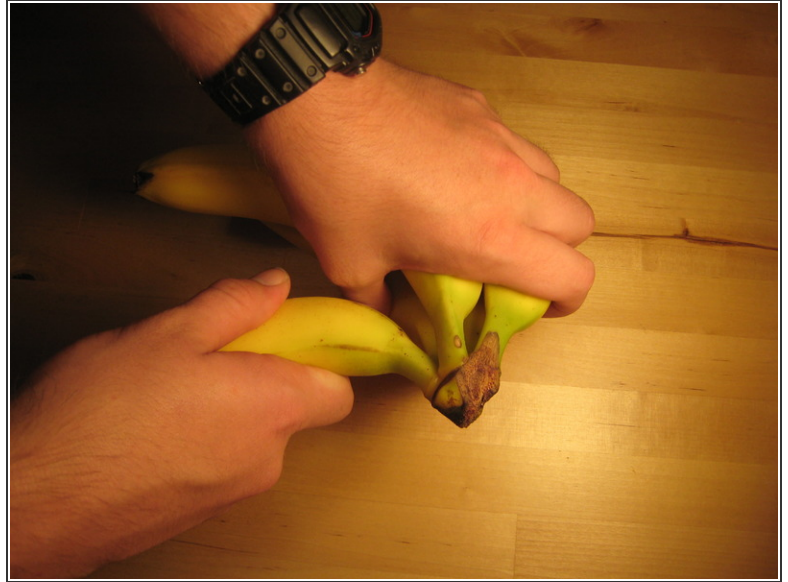

In this teardown, we open a banana to see what's inside. Yellow and delicious, but most importantly, yellow.

TOOLS:

- [Fingers](#) (1)
 - [Teeth](#) (1)
 - [Thumbs](#) (1)
-

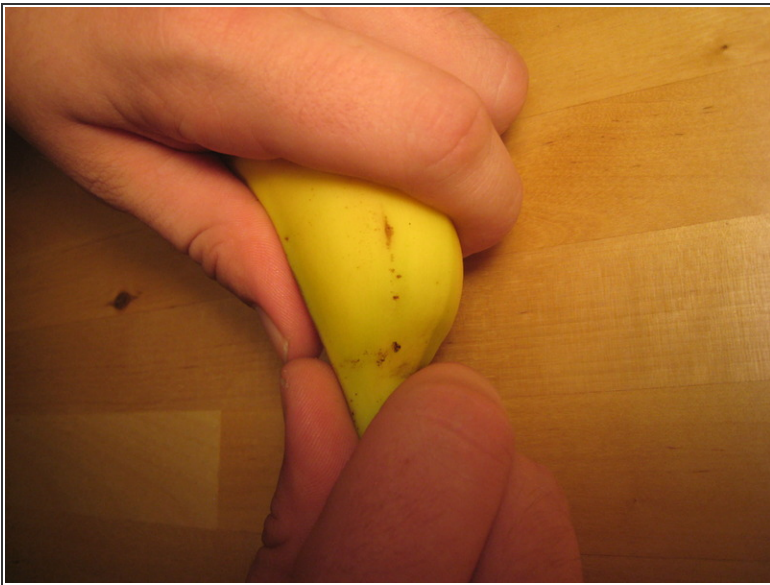

Step 1 — Teardown

- Take one banana from the bunch.

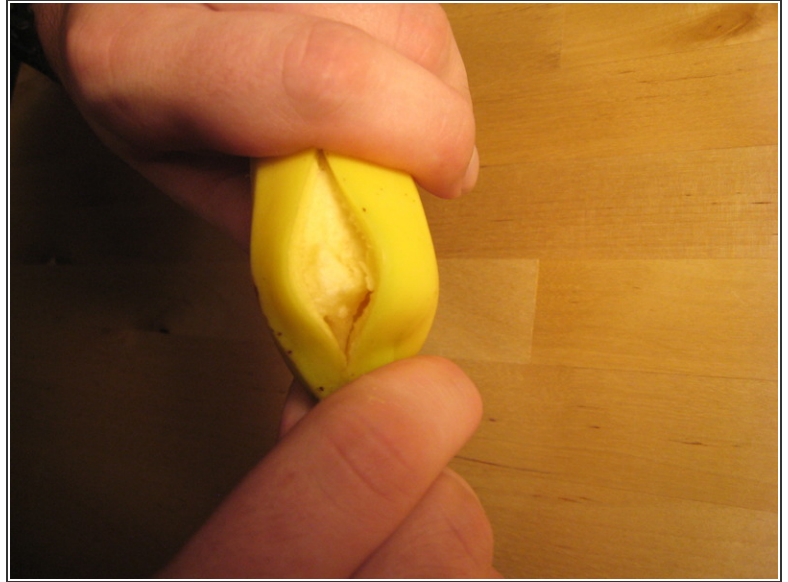

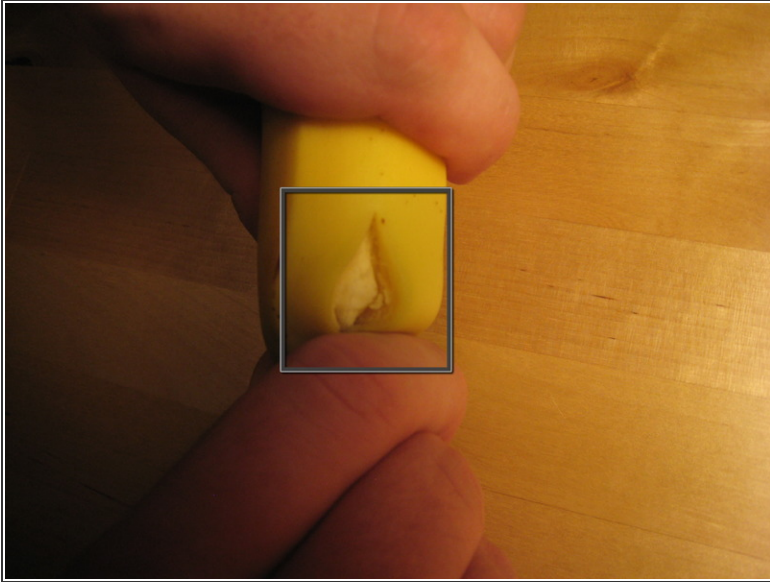

⚠ Don't squeeze too hard!

Step 2

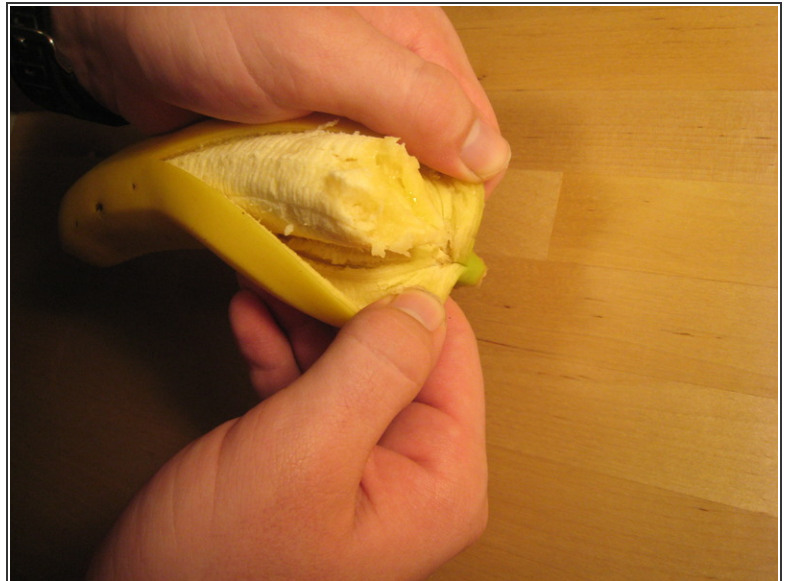

- Hold the banana in your left hand and grip the stem between your right thumb and forefinger.

Step 3

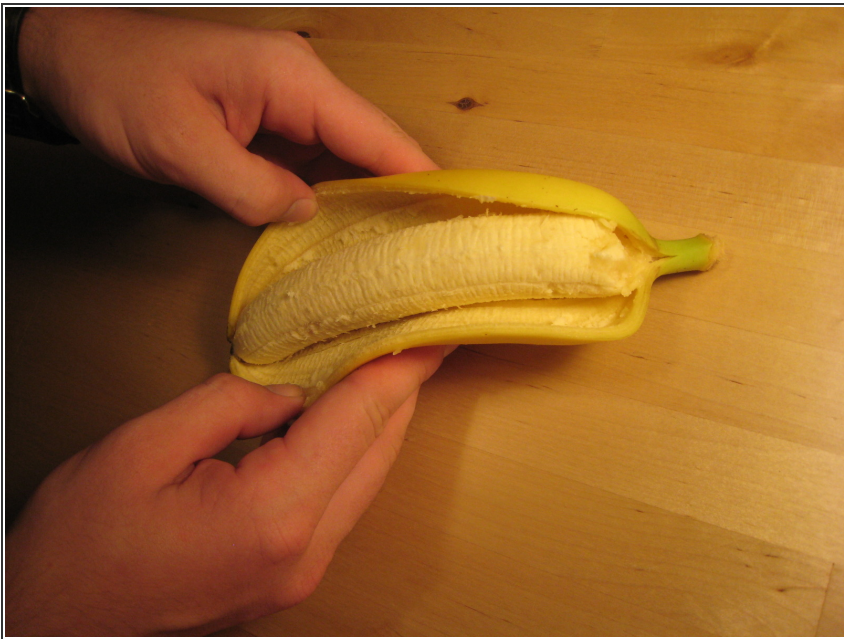

- Pull the stem downward until the peel splits.

Step 4

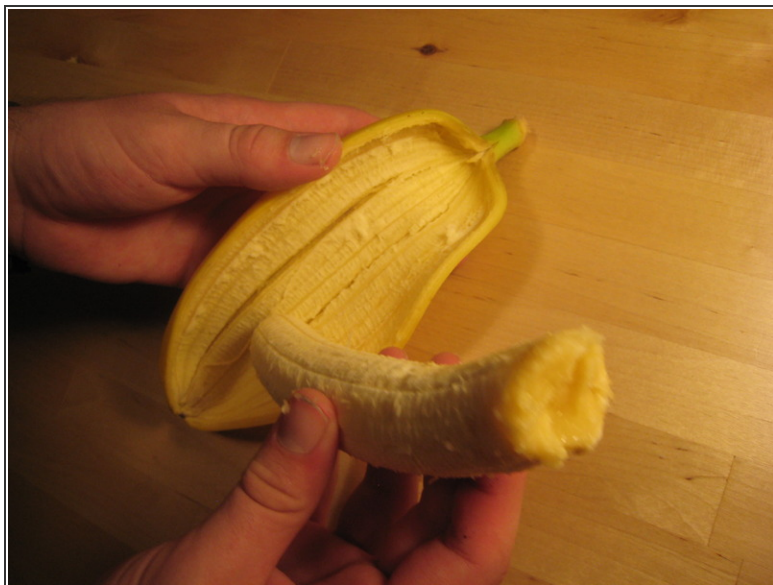

- Insert your thumbs into the split of the peel and pull the two sides apart.
- Expose the top of the banana. It may be slightly squished from pulling on the stem, but this will not affect the flavor.

Step 5

- Pull open the peel, starting from your original split, and opening it along the length of the banana.

Step 6

- Remove fruit from peel.

Step 7

- Eat and enjoy!
- ⓘ This is where you'll need your teeth.
- ⚠ Do not choke on banana!
